

# Choosing Activity First

# Choosing Core:

## *selecting activity first*

- We have created this tool to help you think through activities and target use of core vocabulary.
- Some activities are filled out. These are just ideas, feel free to adapt to the child's and your style/level.
- You will also find a document for moving beyond one word. This will include communication scripts to help you think through the communicative functions to participate in the activities.
- Steps to complete:
  - Pick a motivating activity/topic
  - Fill in words in the different sections
  - Think through the script: what does the communication partner need to say to elicit the targeted vocabulary? Consider the different language functions.
  - Have Fun!

# Scripts

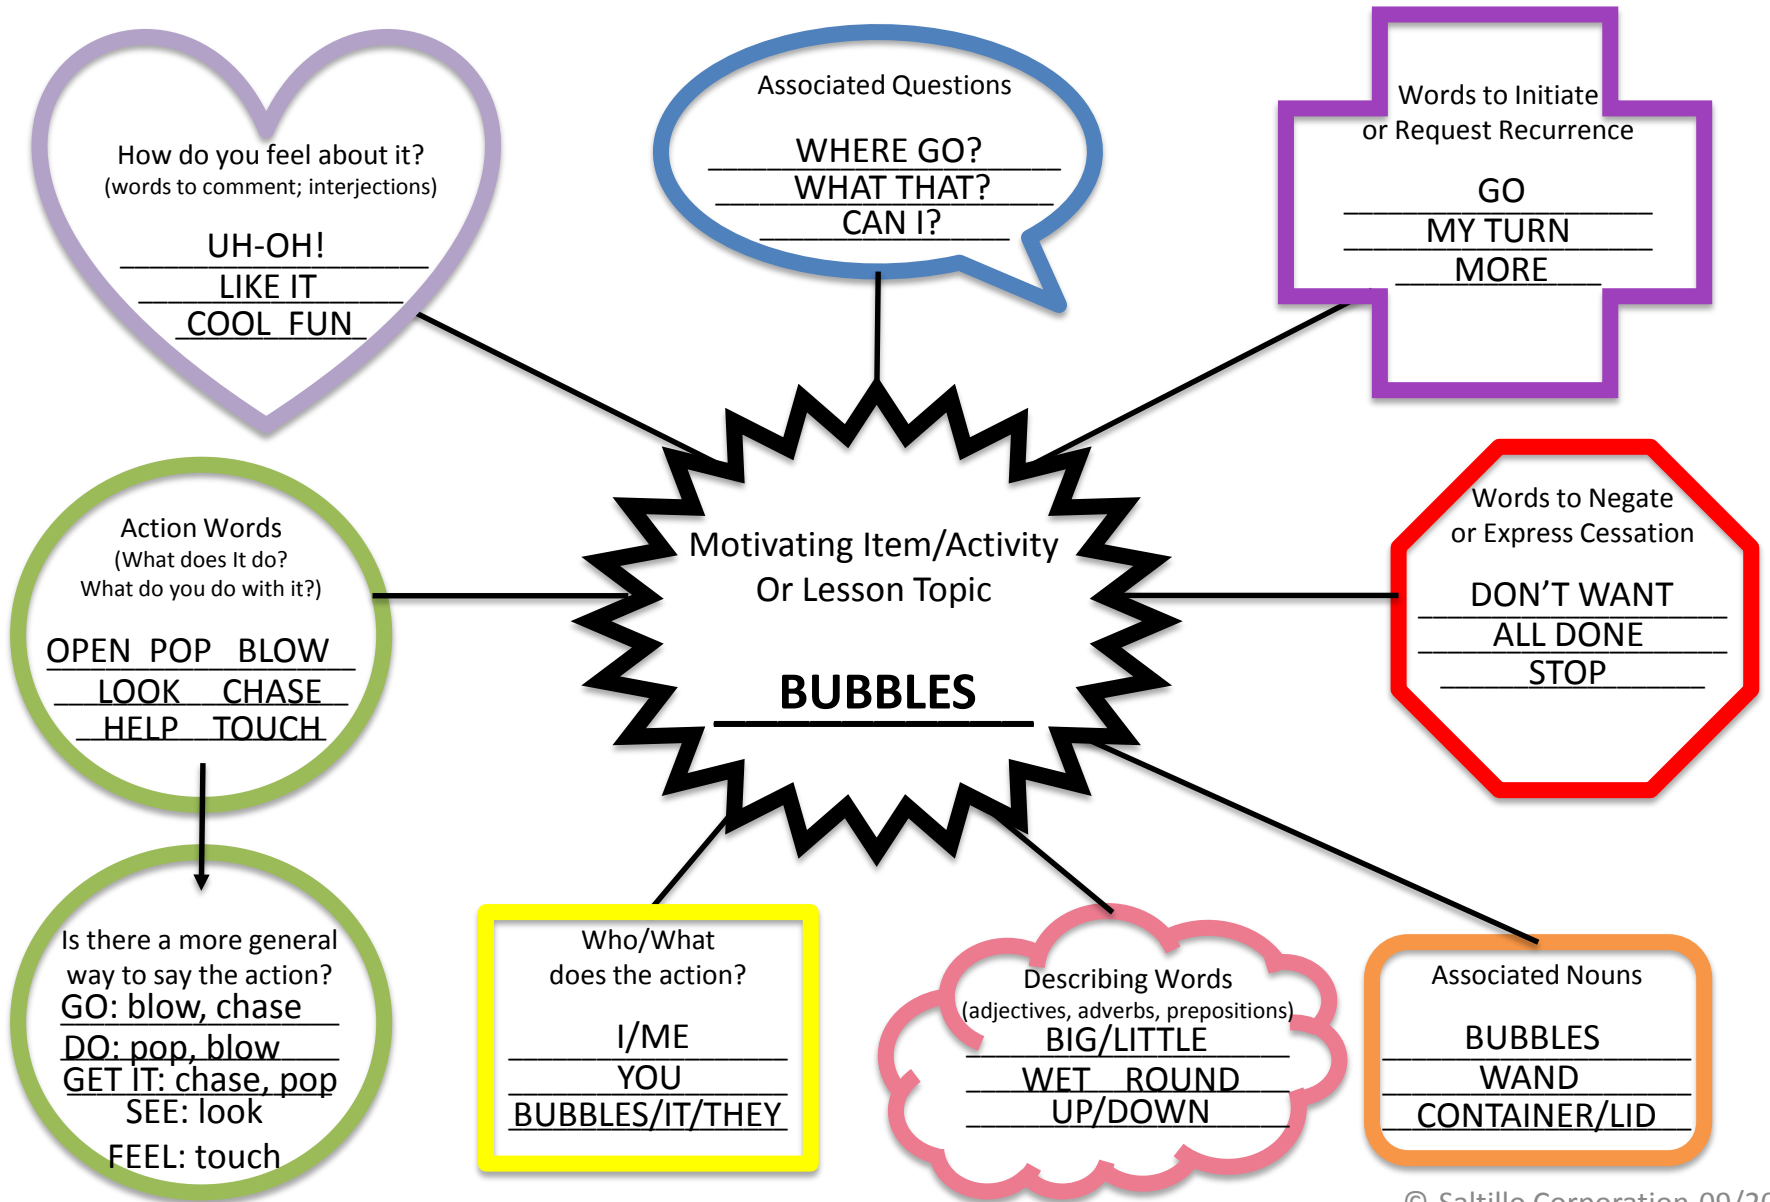

- Scripts are a great way to help us think through the activity.
- They might help others to work with the student. (SLP, OT, PT, parents, assistants, nurse, Teacher, etc)
- After we have used scripts for awhile, it will be easier to think about our communication role in other activities that are not planned out.
- The first couple activity scripts are filled out as an example. We all have learning and teaching styles. Feel free to adapt to your teaching style and your clients learning style. They are started with some simple thoughts. Expand on what client knows and what you are targeting.
- The goal is help foster language growth through open ended questions and statements that lead our client to a variety of language functions and vocabulary growth. This can help us to think beyond requesting and yes/no questions.

# Other tips

- Place items in a container or opaque bag so student needs to ask “what” or “help” or “look”
- Teach the student how to “direct” you in the activity. (What do you want me to do?)
- Make comments and model the vocabulary on the device.
- Respond! Respond! Even mishits need a response!
- Have fun!

# Choosing CORE Vocabulary: "Activity-First" Approach
